

Introducing

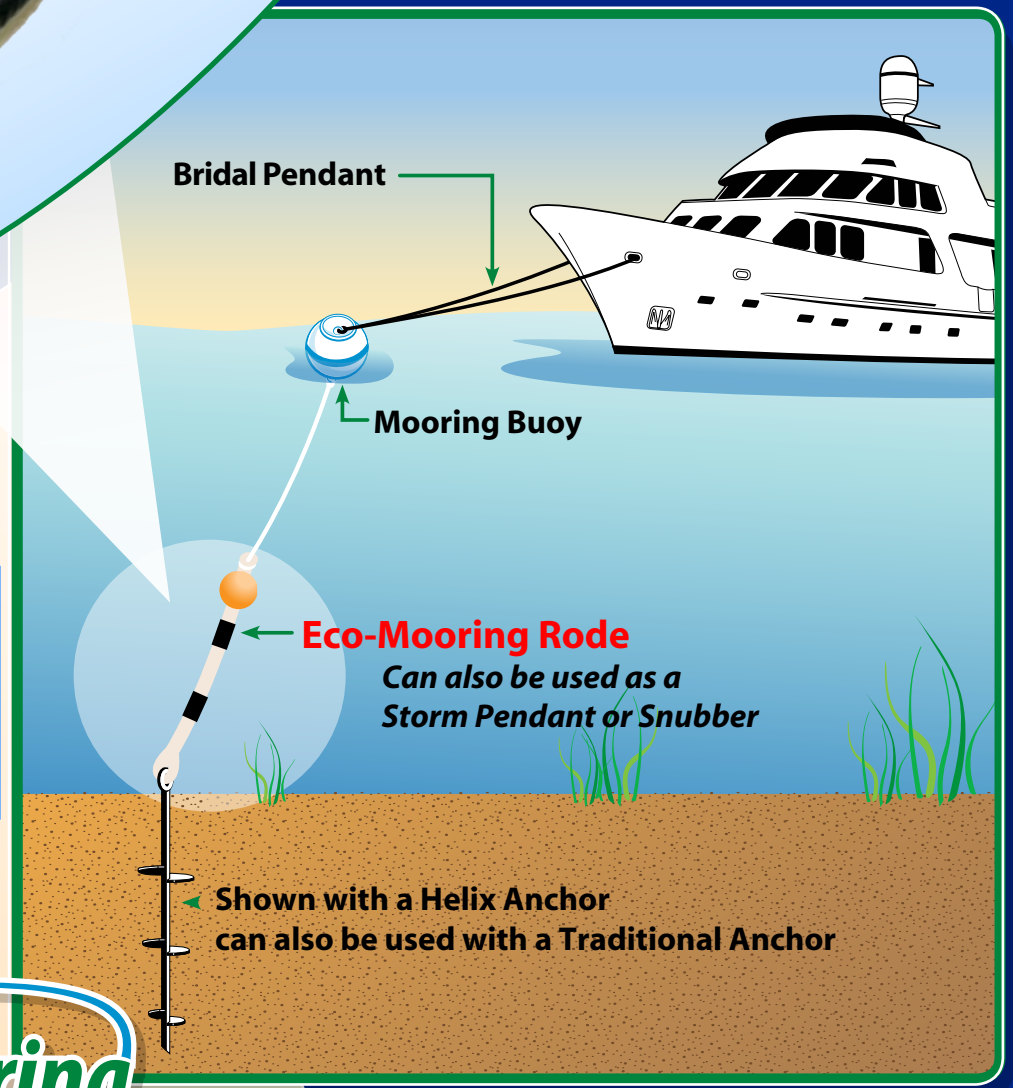

Eco-Mooring Rode™

The Environmentally Friendly Mooring Solution

- 12 Strand Polyfiber Rope
- Absorbs Wind & Wave Motion
- 28,000 lbs of Tensile Strength
- Standard Length is 12 ft. Stretches to 19 ft.
- Floats above Sensitive Habitat
- Long Life Span

Elasticity With Ultimate Strength

The Revolutionary Eco-Mooring Rode™ adds elasticity to the mooring system and offers the opportunity to eliminate harmful bottom chain scouring of sensitive marine habitats.

The 21st Century Environmentally Friendly Method Of Mooring Boats.

Eco-Mooring® Rode

The Environmentally Friendly Mooring Solution

Finally
An
Affordable
Solution

Eco-Rode is a mooring system component designed to absorb the wind and wave motion while providing a high tensile backup. It will minimize damage to sensitive bottom habitat. The standard assembly is 12 feet long and will stretch to 19 feet long under load. At the extended length, the load is transferred to it's 1-5/16 inch diameter rope. The Eco-Rode's 12 strand polyester has been proven in commercial fishing applications to be an extremely durable construction with excellent UV and abrasion resistance. The Eco-Rode mooring component is fabricated with either thimbles or soft eyes on the top or bottom. Hard shell trawl buoys can be added to help float longer systems. (Note: the Eco-Rode can also be used as a Storm Pendant or Snubber)

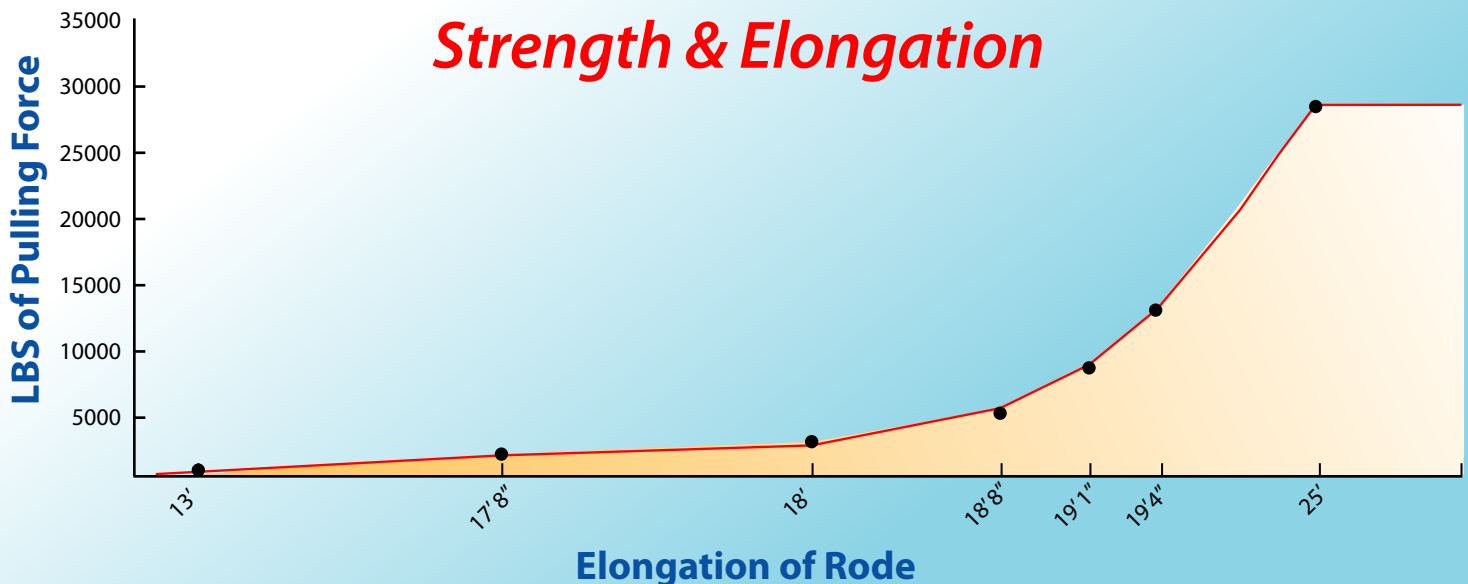

Successfully Used For Years By
Professional Mooring Installers In The
Harsh New England Marine Environment

Features

- Elasticity with strength
- Eliminates scouring of harbor bottom by chain
- Custom lengths can be fabricated
- Abrasion resistant high tensile cover
- Non Corroding design yields longer life
- Energy absorbing polyester jacketed cover
- Can be used with variety of anchors or moorings

Advantages

- Longer life span than traditional chain
- Helps reduce chafing of pendant
- Makes it possible to shorten vessel's swing area
