Mooring Systems for Sensitive Seabeds

Our Eco Mooring System

protects both your vessel and the fragile marine habitat. The combination of our world renowned Helix Anchor with its proven holding capacity, coupled with the Eco-Mooring's anchor-to-buoy components create a superior mooring system when compared to all others on the market today.

- Eliminates bottom chain scouring
- Reduces yawing, seaginer & chafing
- Mother nature has tested our helix anchors in all corners of the globe
- All components are tested and certified
- No moving parts come in contact with the seabed
- Moorings can be safely established in coral and seagrass areas
- Allows shorter scoping, reducing swing circles in crowded mooring fields
- Elastic rode replaces the chain catenary shock absorption and is the only system that backs up the elasticity with 227.5 MPa of tensile strength.
- Our systems are sized according to vessel size, mooring depth, tidal fluctuation and bottom composition...

Features:

- Helix anchors have zero foot print on harbor bottom
- Neutral buoyant Eco-Mooring Rode
- Reduced swing area
- Energy absorbant
- Hi tensile strength back-up

Advantages:

- Eliminates scouring of harbor bottom
- Extended life
- Abrasion resistant
- Absorbs wind and wave motion
